

XG-M2 gaming mouse available in stores in Autumn.

This Autumn, the XG-M2 will start arriving in stores. Xtrfy's new addition to the eSports scene is an optical gaming mouse approved by NiP.

After a series of appreciated gaming products, including two critically acclaimed keyboards, Xtrfy expand their product line by launching the XG-M2. Although the aim was to release the mouse during the summer, the launch was postponed due to Xtrfy's high demands on quality.

"We have seen a great interest in this product since the announcement in June. However, quality is key to us and we decided to postpone the launch for some finishing touches on the construction. The XG-M2 is now ready for launch and we are really happy with the result", says Patric Jönsson, CEO at Xtrfy.

The XG-M2 is developed with a focus on improving player performance.

"Our goal was to create a reliable, high-performing mouse that is guaranteed to help gamers improve. The XG-M2 is a result of carefully selected components and features that we know will do the job", says Joakim Jansson, Co-founder of Xtrfy.

The XG-M2 is a right-handed mouse, designed with a well-known ambidextrous shape to suit different grip styles.

"The shape of this mouse is specifically chosen on recommendation from our network of professional gamers. During the process, we saw that this shape was highly appreciated by many players, although the inside often left a lot to be desired. Based on the input, we together created a mouse with some of the most consistent performing components out there", says Emil "HeatoN" Christensen, Owner/founder of NiP.

The XG-M2 is equipped with the Pixart PMW 3310 optical gaming sensor for great speed, stability and precision. To ensure maximum control, the mouse is provided with a rubberized anti-slip surface for enhanced grip, and teflon feet for superior glide. It has 5 buttons for quick and easy handling, plus a polling rate switch and CPI-buttons for adjusting mouse sensitivity. Built to provide consistent performance for a long time to come, the XG-M2 features high-quality Omron switches and a braided, hard-wearing cable. In terms of durability, the use of teflon feet is also favorable.

The focus on performance is no barrier when it comes to aesthetics. The XG-M2 features 3-zone LED illumination, creating an impactful lighting on the side, the scroll wheel and the logo.

Xtrfy will also launch a special version of the XG-M2, named XG-M2-NIP, which will be produced in a limited edition. The M2-NIP is redesigned and carrying the iconic symbol of Ninjas in Pyjamas, known as one of the most succesful teams in the history of eSports.

Both mice are also thoroughly tested and approved by the members of NiP, as well as the Norwegian team LGB eSports.
